MAN Ships First Airmax

The first AR-MAX1 rests on a test stand at MAN Diesel & Turbo in Oberhausen, Germany. It is one of four Airmax trains that Air Products and Chemicals ordered for a Chinese coal-to-chemicals complex (See July 2013 *COMPRESSORtech*², p. 72). Thomas Mutchler, vice president for global engineering and manufacturing at Air Products, said test results exceeded expectations and the train was released for shipment. Eleven larger Airmax trains are under construction at Oberhausen for other Chinese coal conversion plants.
